Does your film have a future?

Even moderate residual levels of the processing chemical *thiosulfate* will accelerate fading of your film's silver images, and until recently, it was impossible to predict with any certainty whether or not your microfilm records would last. Now, with testing systems from MicroD International, you can make frequent, inexpensive and reliable checks on the performance of your micro-imaging facilities to determine whether or not your film images meet the established standards for density, resolution and residual thiosulfate. Utilizing data easily obtained with our unique testing systems, you will be able to generate film with micro-images of the highest quality that will last far longer than film not meeting the archival requirements. Secure an outstanding future for your highly valued micrographic records with archival testing systems, ancillary equipment and supplies from MicroD International. Our comprehensive line includes:

- Methylene Blue and Silver Densitometric Complete Testing Systems*
- Professional Testing Service*
- Chemical Reagent Kits*
- Densitometers
- Sensitometers
- Microscopes
- Resolution Test Charts
- Visual Temperature Monitors
- Expert Consulting Service

* Conforms to ANSI Standard PH4.8-1978.

We have great expectations for the future of your microfilm records. The quality control systems, products and services from MicroD International are your assurance of archival quality. Write today for our free catalog.
